

OpenTrac Director

Secure and Proven
Solution for Efficient
Inventory Tracking

OpenTrac Director™ is a secure and proven supply chain management software application developed specifically for manufacturing or trading and distribution companies interested in improving their supply chain.

- Allows users to take full ownership of their supply chain and send and receive real-time updates, which improves productivity, decreases costs, and increases margins.
- Increases inventory visibility by coil, customer, processor, order, and quality assurance status to maximize efficiency and profitability.
- Enhances planning and forecast accuracy by basing business activities on historical forecasts and commitments to generate better resource management.
- Identifies short falls, bottlenecks, and delays in order to identify areas requiring improvement.

Reduces overhead by hosting the application at our secure data center with 24x7 support and seamlessly interfacing with other legacy systems.
